About this report

Power to Change commissioned Kantar Public in early 2018 to conduct a 'hyperlocal' version of the national Community Life Survey in seven locations in England. These seven make up Power to Change's place-based investment programme, Empowering Places. This study builds on a similar project conducted in 2017, which tested a method of measuring impact at the local and community level using hyperlocal boosts to the national Community Life Survey.

The Community Life Survey has been carried out annually in England since 2012 to provide Official Statistics on issues that are key to encouraging social action and empowering communities, including volunteering, giving, community engagement and well-being. For analysis, the seven Empowering Places areas were compared with a comparison group constructed for each area from within the national Community Life Survey.

This report outlines the findings from the survey and matching process across the different locations and dimensions of impact. The Technical Appendix (published online alongside this report) contains further information about the methodology, and the full dataset will be available in the UK Data Archive.

KANTAR PUBLIC=

Kantar Public is an independent research organisation that works with more than 40 Governments around the world, as well as many leading universities, NGOs and corporations to build public value. They partner clients with teams that bring local expertise as well as global best practice. Their insight and advice helps clients to make better decisions and drive positive citizen outcomes.

With the longest continuous heritage of any social research company in Britain, Kantar Public UK (formerly TNS BMRB) has played a leading role in chronicling the changing social, political and business landscape of the UK. They undertake research that underpins decision-making by policy makers across national and local government at the highest level, and provide knowledge which helps the private and third sectors plan and care for society.

Reporting conventions

1. Row or column percentages may not sum to 100, due to rounding
2. Symbols that appear in tables:
 - 0 = Less than 0.5 per cent, including none
 - .. = Figures suppressed due to percentage based on 5 or fewer responses

Abbreviations in tables

- MCS: matched comparison sample
- CB: community business sample

The report provides headlines and highlights statistically significant differences at the 95 per cent level between the community business sample and the matched comparison sample.

Findings highlighted in green in the tables identify differences where the average response of the community business sample is significantly **higher** than the average response of the matched comparison sample at the 95 per cent level.

Findings highlighted in red in the tables identify differences where the average response of the community business sample is significantly **lower** than the average response of the matched comparison sample at the 95 per cent level.

Executive summary

Power to Change commissioned Kantar Public in 2018 to conduct a 'hyperlocal' version of the national Community Life Survey (CLS) in the seven operational areas of its Empowering Places programme. Each area has a mean average population 1,500 people. The 'hyperlocal' design builds on a pilot study in 2017 to test a new way of measuring the social impact of community businesses on their local community (Willis et al., 2017). In summary, the pilot study found that the CLS offered a cost-effective approach to creating a baseline measure of community cohesion and social action in the local areas served by community businesses.

The wider research aims to measure the impact of community business in strategic priority areas that have been targeted to grow community businesses. As this is a baseline survey, we are not expecting to see an impact at this stage. It is intended that a follow-up survey will be conducted in future years to assess the impact of the Empowering Places programme on a range of outcomes, using difference-in-difference analysis.

The seven areas included in the research were Abram Ward (Wigan), Manningham (Bradford), Braunstone (Leicester), Nunsthorpe and Bradley Park (Grimsby), Marsh Farm (Luton), Devonport and Stonehouse (Plymouth) and Dyke House (Hartlepool). These seven are all part of Power to Change's 'Empowering Places' programme, that targets funding and resources towards places that look ripe for community business with the aim to boost local economies.

You can find more detail on these areas, including the economic and socio-demographic profiles of each area, at Appendix A.

Approach

Empowering Places, Power to Change's programme of place-based investment, aims to demonstrate the role that concentrated clusters of community businesses can play in improving local areas and reducing inequality. The Empowering Places programme has funded so-called 'catalyst' organisations in seven local areas, to conduct development work on the ground that grows community businesses in their local areas.

The national CLS presented a good opportunity to generate robust, comparable data on the local areas served by community businesses as a means to understand their impact. The CLS is an annual, nationally-representative survey conducted on behalf of government. It provides official statistics on issues key to encouraging social action and empowering communities (DCMS, 2017).¹

¹ Department for Digital, Culture, Media and Sport (2017), Community Life Survey 2016-17 Statistical Release. Available at https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/631936/Community_Life_Survey_-_Statistical_Release_2016-17_FINAL.pdf

Each catalyst's operational area was defined with reference to the Office for National Statistics (ONS) Census Output Area (OA) geography. Within each operational area, we drew a systematic random sample of addresses from the Royal Mail Postcode Address File. At each address, we invited all adults aged 16 plus to complete the questionnaire, either online or on paper.

Each of the operational areas has a national comparison sample identified from within the 2017–18 CLS dataset. With one exception (see below), the comparison sample is the subset of 2017–18 CLS respondents who live in the 10 per cent of English neighbourhoods (lower level super output areas (LSOAs)) that are *most similar to the operational area*. The one exception was the Action for Business operational area in Bradford. This area is majority Asian and has few natural partners within a national sample. Consequently, we identified the most similar 300 LSOAs in England from which we drew a supplementary bespoke comparison sample of addresses.

Fieldwork took place between 16 May and 5 August 2018.

Further details are provided in the Technical Note, published alongside this report.²

Key findings

Eight key metrics were used as baseline measures with a view that, over time, the data will allow conclusions to be drawn about the impact of community businesses on their local area through a difference-in-differences analysis.

These metrics were:

- social isolation
- health and wellbeing
- employability
- local environment
- community cohesion
- community pride and empowerment
- social action
- volunteering.

Overall, findings were mixed and with no clear pattern observed across most metrics. However, we observed some differences between operational areas and their matched comparison sample. This executive summary reports on findings where we observed significant differences (positive or negative) in two or more operational areas for a particular measure or across the overall metric.

As this is a baseline study, these findings should not be seen as a pattern or trend, nor do they reflect the success or otherwise of community businesses.

² Empowering Places? Measuring the impact of community businesses at neighbourhood level. Technical appendix. Available at www.powertochange.org.uk/research/

For our full analysis, please refer to the main body of the report.

Social isolation

The Community Life Survey measures the strength of social support networks. These are important for reducing social isolation. Measures include:

- having people to call on for help
- having people to socialise with
- having people available to listen
- how often people chat to their neighbours
- loneliness.

Those living in Abram Ward, Devonport and Stonehouse, and Dyke House were more likely to report that they chat to their neighbours on most days compared with their matched comparison sample. We identified few other observed differences.

Health and wellbeing

The CLS measures self-reported health by asking two questions, about:

- self-reported rating of general health
- whether have a limiting long-term illness.

Subjective wellbeing is based on the four harmonised measures developed by the Office of National Statistics³:

- Rating of life satisfaction: scale 0 (not at all satisfied) to 10 (completely satisfied)
- Rating of happiness yesterday: scale 0 (not at all happy) to 10 (completely happy)
- Rating of anxious yesterday: scale 0 (not at all anxious) to 10 (completely anxious)
- Rating of how worthwhile the things they do are: scale 0 (not at all worthwhile) to 10 (completely worthwhile).

Again, there were few differences between the operational areas and their matched comparison samples for health and wellbeing measures. Where differences existed, operational areas reported lower levels of self-reported health and wellbeing.

³ For more information on the Office of National Statistics' wellbeing measures see: Government Statistical Service. Available at: <https://gss.civilservice.gov.uk/guidances/harmonisation/0-harmonised-principles/personal-well-being/#questions-input>

Those living in Dyke House and Nunsthorpe and Bradley Park generally reported unfavourably across most of the health and wellbeing measures:

- Those in Nunsthorpe and Bradley Park were less likely to give a ‘high’ life satisfaction rating, less likely to give a ‘high’ rating for feeling their life is worthwhile, and more likely to rate their happiness as ‘low’.
- Similarly, residents living in and around Dyke House were less likely to give a ‘high’ life satisfaction rating, less likely to give a ‘high’ rating for feeling their life is worthwhile, and more likely to give a ‘very high’ rating for anxiety.

Those living in the Marsh Farm and Abram Ward operational areas were also less likely to rate their health as ‘very good’.

Employability

The CLS captures an individual’s economic status.

There were few differences, except for Abram Ward and Manningham where individuals were less likely to be in employment than their matched comparison samples.

Local environment

The CLS captures several measures relating to satisfaction with the local area, including:

- satisfaction with the local area as a place to live
- whether the area has got better or worse to live in over the last two years.

There was generally little variation across these measures between operational areas and their matched comparison sample. Where findings existed, they were both positive and negative:

- Higher levels of satisfaction with the local area were reported in Devonport and Stonehouse, whereas lower levels were reported in Abram Ward and Marsh Farm.
- Dissatisfaction with the provision of local services was more prevalent among residents living in Abram Ward, Dyke House, and Nunsthorpe and Bradley Park operational areas.

Community cohesion

The CLS carries a broad range of community cohesion measures, including:

- extent to which people feel that people from different backgrounds get on well in their local area
- strength of feelings of belonging in their neighbourhood
- levels of trust in their neighbourhood
- diversity of friendship groups
- level of neighbourliness.

There were few observed differences between the operational areas and their matched comparison samples across specific measures of community cohesion.

There was some variation in level of trust. Residents in Abram Ward were more trusting of their neighbours, whereas residents living in the Marsh Farm and Nunsthorpe and Bradley Park operational areas were generally less trusting of their neighbours.

There were some differences between operational areas and their matched comparison samples in the ethnic and religious diversity of friendship groups:

- Those living in Manningham, Dyke House, and Nunsthorpe and Bradley Park had less ethnically diverse friendship groups, whereas those living in Marsh Farm had more ethnically diverse friendship groups.
- Those living in Manningham and Nunsthorpe and Bradley Park also had less religiously diverse friendship groups.

Social action

In the CLS, social action is defined as a community project, event, or activity which local people proactively get together to initiate or support on an unpaid basis. It is distinct from other forms of giving time in that it is driven and led by local people rather than through an existing group (as in formal volunteering) and tends to focus on a community need rather than the needs of an individual (as in informal volunteering).

Social action is measured in two ways:

- involvement in local activities
- awareness of others being involved in local activities.

Residents living in operational areas were just as likely as their matched comparison samples to be involved in social action in the last 12 months. However, awareness of others being involved in local activities was lower in Manningham and Marsh Farm compared with their matched comparison samples.

Civic engagement

The CLS includes three key measures that aim to measure involvement in civic engagement in the last 12 months:

- **civic participation:** engagement in democratic processes, both in person and online, including signing a petition or attending a public rally (does not include voting)
- **civic consultation:** taking part in consultations about local services, both in person and online
- **civic activism:** involvement in decision-making about local services or in the provision of these services (for example, being a school governor or a magistrate), both in person and online.

There were few differences across civic engagement measures between operational areas and their matched comparison samples. Those living in the Dyke House and Devonport and Stonehouse operational areas were more likely to report involvement in civic consultation in the last 12 months, while those living in the Devonport and Stonehouse operational area were also more likely to report involvement in civic activism in the last 12 months.

For community pride and empowerment, and volunteering, there was very little variation to report (please see the main report for the full details).

Further research

As the Empowering Places programme launched in August 2017, we do not expect to see differences between the operational areas and the matched comparison areas at this stage. Instead this study acts as a baseline from which progress can be measured over time. It is intended that a follow-up survey will be conducted in future years to assess the impact of community businesses on their local communities.

Introduction

1.1 Background to the Empowering Places programme

Empowering Places, Power to Change's programme of place-based investment, aims to demonstrate the role that concentrated clusters of community businesses can play in improving local areas and reducing inequality.

To achieve this aim, the Empowering Places programme helps community-based organisations – also known as catalyst organisations – to create new networks of community businesses through a mixture of grants, support and practical tools. The Empowering Places Programme has funded catalyst organisations in seven local areas. Power to Change is working through a delivery partnership led by Co-operatives UK with the New Economics Foundation (NEF) and the Centre for Local Economic Strategies (CLES).

Catalyst organisations are required to create development plans that identify local issues in the community that can be tackled by community businesses, and then engage in development work on the ground to grow community businesses in their local areas. This report focuses on the impact of these community businesses and not the catalyst organisations.

Community businesses – owned and run by local communities themselves – aspire to transform their local areas through engaging local people as co-creators in delivering goods or services. As such, community businesses have the potential to save or regenerate businesses or assets that may otherwise fail. They build high levels of community buy-in and support for ventures and develop innovative and often low-cost business models. Community businesses help strengthen local communities by involving local people in decision-making and enhancing social capital by, for example, providing vital meeting spaces and developing links between staff, volunteers and customers (Percy et al., 2016).

Table 1.1: Empowering Places catalyst organisations and the local area they work in

Catalyst	Local area	Town/city	2011 Census population	MSOA mean IMD decile
Real Ideas Organisation (RIO)	Devonport and Stonehouse	Plymouth	13,478	Most deprived
B-Inspired (The Braunstone Foundation)	Braunstone	Leicester	15,585	Most deprived
Action for Business	Manningham	Bradford	19,983	Most deprived
Centre4	Nunsthorpe and Bradley Park	Grimsby	11,769	Most deprived
Abram Ward Community Cooperative	Abram Ward	Wigan	12,664	Second most deprived
The Wharton Trust	Dyke House	Hartlepool	4,952	Most deprived
Marsh Farm Futures	Marsh Farm	Luton	17,331	Third most deprived

The catalyst organisations work in defined operational areas, sometimes as small as a square mile around their central asset, covering just one or two wards. They have all developed five-year plans to address the particular needs of their communities in a way that promotes community business as part of the solution.

Within each local area, the catalyst organisation aims to achieve one or more of the following outcomes over a five-year period, through the creation of community businesses:

1. Reduce social isolation
2. Improve health and wellbeing
3. Increase employability
4. Improve access to basic services
5. Increase community pride and empowerment
6. Improve the local environment
7. Create greater community cohesion

The catalyst organisations also have a charitable objective to address key issues in the local area such as:

- financial hardship, poverty and disadvantage
- exclusion or isolation due to youth or old age
- ill-health or disability.

1.2 Research background

To measure the success (or otherwise) of the Empowering Places programme, Power to Change commissioned Kantar Public to conduct a 'hyperlocal' version of the Community Life Survey (CLS) in each of the seven operational catalyst areas (see Section 1.3 and 1.4 for further details of the CLS). For each area, a comparison sample was drawn from the national CLS, with one exception (Action for Business operational area in Bradford, see section 1.7). As per the CLS, invites were sent out to randomly selected households in the selected areas and not specifically to a sample of community business users.

As this is a baseline survey, we are not evaluating the current impact of community businesses. It is intended that a follow-up survey using difference-in-difference analysis will be conducted in future years, to assess the impact the Empowering Places programme has on a range of outcomes.

Many of the measures collected in the national CLS relate closely to the intended outcomes of the Empowering Places Programme. Given this alignment, the CLS presents a cost-effective opportunity to measure the impact of the Empowering Places programme in each local area over time.

1.3 Background to the Community Life Survey

Since 2012–13, the CLS has been carried out annually by Kantar Public on behalf of the Department for Digital, Culture, Media and Sport (DCMS), to provide official statistics on issues that are key to encouraging social action and empowering communities – including volunteering, giving, community engagement and wellbeing (Department for Digital, Culture, Media and Sport, 2017).⁴

The key objectives of the survey are to:

- Provide robust, nationally representative data on behaviours and attitudes within communities to inform and direct policy and action in these areas.
- Provide data of value to all users, including public bodies, external stakeholders and the public.
- Underpin further research and debate on building stronger communities.

⁴ For more information on Official Statistics see: UK Statistics Authority. Available at <https://www.statisticsauthority.gov.uk/about-the-authority/uk-statistical-system/types-of-official-statistics/>

1.4 Summary of approach

The ‘hyperlocal’ survey used the CLS national model, which acted as a sample boost targeted towards operational areas of the selected catalyst organisations.

Within each operational area, we drew a systematic random sample of addresses from the Royal Mail Postcode Address File and sent letters inviting all adults aged 16 plus at each address to complete the questionnaire, either online or on paper. Up to three reminder letters were sent, with two paper questionnaires included for a targeted subset of addresses in the second reminder.

We constructed comparison samples for each operation area from within the 2017–18 national CLS, with one exception – Action for Business operational area in Bradford (see the Technical Appendix).

The ‘hyperlocal’ design builds on a pilot study conducted in 2017 to test a new way of measuring the social impact of community businesses on their local community (Willis et al., 2017). In summary, the pilot study found that the CLS offered a cost-effective approach to creating a baseline measure of community cohesion and social action in the local areas served by community businesses. The 2017 report outlined several methodological recommendations for use in future. As a result, the following adaptations were implemented for this study:

- Each operational area was defined with reference to Office for National Statistics (ONS) Census Output Area (OA) geography rather than postcodes. While postcodes are tailored it means no direct population statistics are available to use as a test of the weighting method’s ability to work as a calibration mechanism.
- Comparison areas were set out in advance (i.e. the 10 per cent most similar, or the 1 per cent most similar for Bradford). This allowed the comparison samples to be pre-identified from the 2017–18 national CLS (and assessed for sufficiency). It also ensured a clear definition for future research purposes.

Although the comparison samples are drawn from the national 2017-18 CLS sample, each is – by design – an *unrepresentative* subset of that national sample. Please refer to the 2017-18 CLS statistical release⁵ for full national population estimates.

1.5 Sampling

For the purposes of the survey, each organisation’s operational area was defined with reference to ONS OA geography and was formed of a contiguous combination of whole OAs (the smallest unit in the ONS hierarchy). Maps of these operational areas were produced by Power to Change in conjunction with Kantar Public.

5 The 2017-18 Community Life Survey statistical release can be found at <https://www.gov.uk/government/statistics/community-life-survey-2017-18>. For any queries about the Community Life national data, please contact evidence@culture.gov.uk

Within each operational area, Kantar Public drew a systematic random sample of addresses from the Royal Mail Postcode Address File, aiming for 300 completed questionnaires and maximal geographical dispersion. The number of addresses sampled in each operational area was calculated via a statistical model of response probability, using data from the 2017–18 CLS. Table 1.2 shows how many addresses were sampled in each area.

Table 1.2: Address samples in each operational area

Operational area	Total sample of addresses
Abram Ward Community Charity, Wigan	1,550
Action for Business, Bradford	1,044
B-inspired, Leicester	1,121
Centre4, North East Lincolnshire	1,062
Marsh Farm Futures, Luton	1,103
RIO, Plymouth	1,135
Wharton Trust, Hartlepool	1,069

At each address, all adults aged 16 plus were invited to complete the questionnaire, either online or on paper.

1.6 Fieldwork and response

Fieldwork took place between 16 May and 5 August 2018.

The standard model for the CLS is to send two reminders, each a fortnight apart, but with a third reminder in reserve. In the second reminder, two paper questionnaires are included for a targeted subset of addresses.⁶ All respondents who completed the survey received a £10 voucher to thank them for their contribution.

We undertook a programme of post-fieldwork verification to assure the quality of the data. This was based on the same verification methods developed for the national CLS. The number of completed questionnaires (online and paper, after editing) is shown in table 1.3.

⁶ Respondents were not asked about community businesses or the catalyst organisation as part of the Community Life Survey.

Table 1.3: Number of completed questionnaires

Operational area	Online completions	Paper completions	Total completions
Abram Ward Community Charity, Wigan*	305 (69%)	139 (31%)	444
Action for Business, Bradford*	186 (68%)	89 (32%)	275
B-inspired, Leicester	190 (56%)	152 (44%)	342
Centre4, North East Lincolnshire*	174 (54%)	151 (46%)	325
Marsh Farm Futures, Luton*	236 (69%)	106 (31%)	342
RIO, Plymouth	247 (64%)	138 (36%)	385
Wharton Trust, Hartlepool	186 (60%)	122 (40%)	308
Bespoke comparison sample for Action for Business (300 LSOAs)	211 (64%)	117 (36%)	328

*Third reminders sent to random subset of addresses

1.6 Identification of comparison samples

Each of the operational areas has a national comparison sample identified from within the 2017–18 CLS dataset. With one exception, the comparison sample is the subset of 2017–18 CLS respondents who live in the 10 per cent of English neighbourhoods that are most similar to the operational area.

The one exception is the Action for Business operational area in Bradford. This area is majority Asian (77 per cent in the 2011 Census) – predominantly of Pakistani ethnic heritage – and has few natural partners within a national sample. Consequently, we identified the most similar 300 LSOAs in England (approximately 1 per cent of the total, instead of 10 per cent) and drew a supplementary bespoke comparison sample of 1,006 addresses from across these LSOAs, treating them in the same way as the addresses drawn from the seven operational areas.

1.8 Limitations

As with any research, there are limitations.

To measure impact, we would need the community businesses created by the catalyst organisations to have a reasonable effect and for a relatively close match to be identified in the comparison sample derived from the national sample. This comparison sample should be large enough to ensure that unusual effects within the sample zone can be detected, but not so large that the comparison sample's similarity to the target sample zone is lost.

The analysis assumes that controlling for differences in key census statistics, and indices of deprivation, is enough to eradicate systematic differences between sampled operational areas on the one hand and comparison sample areas on the other. What is left is then assumed to be the impact of the community businesses. In isolation, the strength of evidence is weaker than might be obtained from a randomised controlled trial (RCT)⁷ or difference-in-difference analysis. However, if data is also collected again in a few years' time, it should be possible to carry out the latter type of analysis at that point.

As the main Empowering Places programme began in August 2017, we do not expect to see differences between the operational areas and the matched comparison areas at this stage. Instead this study acts as a baseline from which progress can be measured over time.

See the Technical Appendix for further information.

⁷ The implementation of such a design was not possible in this case as the businesses were already in place at the time of interview.

2. Research findings

2.1 Social isolation

The local environment can have a significant impact on whether a person feels socially isolated. Research by Public Health England (2015) has highlighted that local services and initiatives can impact social isolation by bringing individuals together, even if this is not their primary aim. Many community businesses act as a hub for local people to come together, helping to foster social connections. At application, 22 per cent of applicants for Power to Change funding stated that they aim to ‘reduce social isolation’ (n=570, January 2015–May 2018).

The Community Life Survey (CLS) includes measures that capture strength of social support networks, including:

- having people to call on for help
- having people to socialise with
- having people available to listen
- how often people chat to their neighbours
- loneliness.

Generally, there were few differences between the operational areas and their matched comparison samples on these measures (see Table 2.1). Where differences were observed, they did not follow a clear pattern:

- Residents living in the Braunstone operational area were more likely to disagree that, ‘if I needed help, there are people who would be there for me’ (10% compared with 5% in the matched comparison sample).
- Residents living in the Manningham operational area were more likely to agree that, ‘If I wanted company or to socialise, there are people I can call on’ (97% compared with 90% in the matched comparison sample). Conversely, those living in the Devonport and Stonehouse operational area were less likely to agree that they could call on people if they wanted company or to socialise (85% compared with 91% in the matched comparison sample).

- Compared with the matched comparison area, residents living in the Abram Ward operational area were more likely to report only having one person they can really count on to listen to them (33% vs 22%, respectively). Individuals living in the Marsh Farm operational area were less likely to report they had no one they could count on (3% compared with 6% in the matched comparison sample).
- Residents living in the Abram Ward, Devonport and Stonehouse, and Dyke House operational areas were more likely to report that they chat to their neighbours most days compared with their matched sample (29% vs 16% in Abram Ward, 26% vs 18% in Devonport and Stonehouse, and 27% vs 20% in Dyke House, respectively).
- Residents living in the Dyke House operational area were more likely to report feeling lonely often or always (12% compared with 7% in the matched comparison sample). Those living in Braunstone were less likely to report ‘hardly ever’ feeling lonely (21% compared with 28% in the matched comparison sample).

2.2 Health and wellbeing

There is extensive evidence that connected and empowered communities promote good health (PHE/NHS England, 2015), while more active community involvement can lead to increased life satisfaction and wellbeing (Jones et al., 2016).

Community-owned models have demonstrated they can deliver improved health and social care outcomes that are viable in the long term (Power to Change, 2017). Over the longer-term, we might therefore expect to see an increase in health and wellbeing scores in areas with community businesses focussed on providing health and wellbeing services. More widely we would hope to see improved health and wellbeing outcomes in operational areas as a result of strengthened communities.

2.2.1 Self-reported health

The CLS measures self-reported health by asking two questions:

- self-reported rating of general health
- whether have a limiting long-term illness.

In general, there were few differences between the operational areas and the matched comparison samples on these measures (see Table 2.2). Where differences existed, operational areas were associated with lower levels of self-reported health compared with the matched comparison samples.

Individuals living in the Marsh Farm and Abram Ward operational areas were less likely to rate their health as ‘very good’ compared with their matched comparison samples (15% vs 26% and 19% vs 27%, respectively). Residents living in the Devonport and Stonehouse operational area were more likely to rate their health as bad (8% compared with 3% in the matched comparison area).

2.2.2 Personal wellbeing

Subjective wellbeing is based on the four harmonised measures developed by the Office of National Statistics:⁸

- Rating of life satisfaction: scale 0 (not at all satisfied) to 10 (completely satisfied)
- Rating of happiness yesterday: scale 0 (not at all happy) to 10 (completely happy)
- Rating of anxious yesterday: scale 0 (not at all anxious) to 10 (completely anxious)
- Rating of how worthwhile the things they do are: scale 0 (not at all worthwhile) to 10 (completely worthwhile).

These questions allow people to assess their life overall, as well as providing an indication of their day-to-day feelings. The 2017–18 national CLS highlighted that national levels of personal wellbeing have remained consistent over the last year (average ratings of 7.1 out of 10 for life satisfaction, 7.1 out of 10 for happiness yesterday, 3.4 out of 10 for anxiety yesterday and 7.3 out of 10 for feeling that what you do in life is worthwhile) (DCMS, 2018).

Similar to self-reported health, where differences existed, operational areas were generally associated with lower levels of personal wellbeing compared with their matched comparison samples (see Table 2.3). There were some differences between the operational areas and their matched comparison areas in all areas except Abram Ward and Devonport and Stonehouse. However, differences between operational and matched control areas were particularly concentrated in the localities of Nunsthorpe and Bradley Park, and Dyke House.

Residents living near the Nunsthorpe and Bradley Park operational area were less likely than their matched comparison sample to give a ‘high’ life satisfaction rating (35% vs 45%), less likely to give a ‘high’ rating for feeling their life is worthwhile (32% vs 41%), and more likely to rate their happiness as ‘low’ (21% vs 14%).

Similarly, residents living in the Dyke House operational area were less likely than their matched comparison sample to give a ‘high’ life satisfaction rating (33% vs 46%), less likely to give a ‘high’ rating for feeling their life is worthwhile (32% vs 40%), and were also more likely to give a ‘very high’ rating for anxiety (34% vs 27%).

⁸ For more information on Official of National Statistics well-being measures see: Government Statistic Service. Available at: <https://gss.civilservice.gov.uk/guidances/harmonisation/0-harmonised-principles/personal-well-being/#questions-input->

2.3 Employability

The Empowering Places programme aims to boost opportunities for employment, either directly or indirectly by accelerating the growth of community business. Some community businesses offer opportunities to work for the business directly, while others offer practical help by building transferable skills which young people can take into education, training and employment. Volunteering as part of a community business can also help build transferable skills and improve employability.

Compared with their matched comparison areas, residents living in the Abram Ward and Manningham operational areas were less likely to be in employment (respectively, 58% vs 74% in Abram Ward, and 41% vs 54% in Manningham) (see Table 2.4).

Table 2.4: Whether in employment (%)

2.4 Local environment

2.4.1 Satisfaction with local area

A key aim for the Empowering Places programme is to improve the local environment by inspiring local regeneration via community business. This, in turn, can lead to increased levels of satisfaction within the local area.

The CLS captures several measures relating to satisfaction with the local area, including:

- satisfaction with the local area as a place to live
- whether the area has got better or worse to live in over the last two years.

There was generally little variation in levels of satisfaction with the local area across most operational areas compared with their matched comparison samples (see Table 2.5). Residents living in the Devonport and Stonehouse operational area reported higher levels of satisfaction with their local area as a place to live compared with their matched comparison sample (75% vs 68%). In particular, they were more likely to report being 'very satisfied' (27% compared with 20% in their matched comparison sample). Conversely, those living around the Abram Ward and Marsh Farm localities reported lower levels of satisfaction (55% vs 67% in Abram Ward, and 63% vs 72% in Marsh Farm, respectively), with residents in Abram Ward also reporting higher levels of dissatisfaction (either 'fairly' or 'very') with the local area (21% vs 12%, respectively).

The survey also captured whether people felt their local area had become better or worse to live in over the past two years (see Table 2.5). Residents living in the Devonport and Stonehouse operational area were more likely to feel that the area had got better in the past two years (37% compared with 15% in their matched comparison sample), while residents living in the Manningham operational area were less likely to say that the area had got worse over the last two years (27% compared with 42% in their matched comparison sample).

2.4.2 Access to services

The area we live in and the availability of local services such as shops, schools, community centres and pubs and amenities can influence life satisfaction and wellbeing. A lack of access to basic services can lead to poorer quality of life and social isolation, especially for older people and those dependent on public transport to access services.

A common characteristic of community businesses is the delivery of positive social, economic and environmental benefits for the whole community, by helping to regenerate communities and, in many cases, provide vital services and amenities required locally.

The CLS measures levels of satisfaction with local services and amenities.

Focussing on overall levels of satisfaction and dissatisfaction, residents in the Abram Ward, Nunsthorpe and Bradley Park, and Dyke House operational areas were more likely to be dissatisfied with the provision of local services compared with their matched comparison samples (respectively, 15% vs 9% in Abram Ward, 16% vs 10% in Nunsthorpe and Bradley Park, and 16% vs 9% in Dyke House) (see Table 2.6).

2.5 Community cohesion

The Power to Change Annual Grantee Survey (2019) reported that 90 per cent of the community businesses it had funded by 2018 felt they had an impact on community cohesion. Many community businesses strive to provide a space in which local people come together, regardless of religious, ethnic and social background. Community businesses aim to promote community integration and a sense of shared identity and purpose.

The CLS carries a broad range of community cohesion measures, including:

- extent to which people feel that people from different backgrounds get on well in their local area
- strength of feelings of belonging in their neighbourhood
- levels of trust in their neighbourhood
- diversity of friendship groups
- level of neighbourliness.

In the CLS, ‘local area’ is defined as a ‘15–20-minute walking distance from your home’, while ‘neighbourhood’ is defined as ‘within a few minutes walking distance from your home’.

2.5.1 Perceptions of community cohesion

The key community cohesion measure in the CLS captures the extent to which people agree or disagree that their local area is a place where people from different backgrounds get on well together.

On this measure, most operational areas were not different in profile to their matched comparison samples (see Table 2.7). The only difference was detected in Abram Ward, where residents living within the operational locality were less likely to agree that people from different backgrounds get on (68% compared with 76% in the matched comparison sample).

2.5.2 Feeling of belonging to local area

There were again few differences between operational areas and their matched comparison samples with respect to feelings of belonging, either to Britain or their local neighbourhood (see Table 2.8). The sole exception was that residents living around the Dyke House operational area were more likely than their matched comparison sample to feel they belonged ‘very strongly’ to their immediate neighbourhood (20% compared with 13% in the matched comparison sample).

2.5.3 Levels of trust

There was some variation in level of trust between operational areas and their matched comparison samples (see Table 2.9). Residents in Abram Ward were more trusting of their neighbours (2% considered that ‘no-one could be trusted’ compared with 5% in the matched comparison sample). On the other hand, residents in the Marsh Farm operational area were less trusting of their neighbours (22% thought ‘many people’ could be trusted compared with 30% in the matched comparison sample). While there were also some differences between operational areas and matched comparison samples in Braunstone and Devonport and Stonehouse, the differences do not follow a clear pattern.

In terms of generalised trust (i.e. trust in general, not specific to their local community) residents living in the Nunsthorpe and Bradley Park, and Marsh Farm operational areas were generally less trusting than their matched comparison samples. Individuals living in the Nunsthorpe and Bradley Park operational area were less likely to rate their level of trust as ‘high’ (19% compared with 28% in the matched comparison sample), while those living in Marsh Farm were less likely to rate their level of trust as ‘very high’ (2% compared with 6% in the matched comparison sample) (see Table 2.9).

2.5.4 Diversity of friendship groups

Diversity of friendship groups can also have an impact on community cohesion. The CLS covers a range of measures on friendship diversity, including the proportion of friends that are the same:

- ethnic group
- faith group
- age group
- educational level.

When we compared operational areas with matched comparison samples we noted the following differences in terms of ethnic and religious diversity of friendship groups:

Residents living in the operational areas in Manningham and Nunsthorpe and Bradley Park had less ethnically and religiously diverse friendship groups than their matched comparison samples. This was evidenced by higher proportions stating that they have friends of ‘all the same’ ethnicity (39% vs 28% in Manningham, and 57% vs 44% in Nunsthorpe and Bradley Park, respectively), and higher proportions stating that they have friends of ‘all the same’ religion (42% vs 29% in Manningham, and 46% vs 32% in Nunsthorpe and Bradley Park, respectively).

- Residents in the Dyke House operational area also had less ethnically diverse friendship groups (59% said their friends were ‘all the same’ ethnicity compared with 48% in the matched comparison sample).
- Conversely, residents living near Braunstone and Marsh Farm operational areas had more ethnically diverse friendship groups (proportion saying friends were ‘all the same’ ethnicity: 26% vs 39% in Braunstone, and 20% vs 31% in Marsh Farm, respectively) (see Table 2.10).

- In terms of diversity of friendships by age and education, there were virtually no differences between the operational areas and their matched comparison samples, with the sole exception of Abram Ward where residents living in the operational area were more likely to say their friends were ‘all the same’ educational level as themselves (26% vs 16%) (see Table 2.10).

2.5.5 Neighbourliness

Neighbourliness is measured in the CLS by the extent to which people agree or disagree that they ‘often borrow and exchange favours with neighbours’.

On this measure, there were no differences between operational areas and their matched comparison samples in all areas except Marsh Farm operational area (31% agreed that they ‘borrow and exchanged favours with neighbours’ compared with 38% in the matched comparison sample) (see Table 2.11).

2.6 Community pride and empowerment

Helping to foster greater community pride and employment through community business is a key focus of the Empowering Places programme. Indeed, research suggests that empowerment can help people exert some control in their local area, which in turn can improve local wellbeing (Hothy et al., 2007). The CLS captures a number of measures relating to community pride and empowerment, including:

- whether local people pull together to improve the neighbourhood
- influence on decisions affecting the area
- importance of being able to influence decisions in the local area
- whether involvement in the local community leads to changes in decision-making
- whether local people would like to be more involved in the council decisions in the local area.

There was generally little variation between the operational areas and their matched comparison samples across these measures (see Table 2.12). The key differences include:

- residents in the Devonport and Stonehouse operational area were more likely to agree that people in the area pull together to improve the neighbourhood (59% compared with 48% in the matched comparison sample), while those in the Marsh operational area were more likely to disagree (41% compared with 52% in the matched comparison sample).

- residents living in the Braunstone operational area were more likely to feel able to influence decisions affecting their local area (26% compared with 17% in the matched comparison sample).

2.7 Social action

In the CLS, social action is defined as a community project, event or activity which local people proactively get together to initiate or support on an unpaid basis. It is distinct from other forms of giving time in that it is driven and led by local people rather than through an existing group (as in formal volunteering) and tends to focus on a community need rather than the needs of an individual (as in informal volunteering). Examples can include:

- setting up a new service/amenity
- stopping the closure of a service/amenity
- stopping something happening in the local area
- running a local service on a voluntary basis
- helping to organise a street party or community event.

Social action is measured in two ways:

- involvement in local activities
- awareness of others being involved in local activities.

The Empowering Places programme seeks to foster greater community cohesion through community business bringing people together to improve the local area and to tackle problems collectively.

Residents living in operational areas were just as likely as their matched comparison samples to be involved in social action in the last 12 months.

Following the pattern observed in the general population, residents living in operational areas were more likely to be aware of social action in their communities in the last 12 months, than to actually get involved (Hamlyn et al., 2013; DCMS, 2018). Awareness of others being involved in local activities was lower in Manningham and Marsh Farm operational areas compared with their matched comparison samples (23% vs 35% in Manningham, and 19% vs 28% in Abram Ward, respectively) (see Table 2.13).

2.7.1 Civic engagement

The CLS includes three key measures that aim to measure involvement in civic engagement in the last 12 months:

- **civic participation:** engagement in democratic processes, both in person and online, including signing a petition or attending a public rally (does not include voting)
- **civic consultation:** taking part in consultations about local services, both in person and online
- **civic activism:** involvement in decision-making about local services or in the provision of these services (for example, being a school governor or a magistrate), both in person and online.

There were few differences between operational areas and their comparison matched samples, on these measures (see Table 2.14). The key differences include:

- residents living in the Marsh Farm operational area were less likely to report involvement in civic participation in the last 12 months compared with their matched comparison sample (25% vs 33%).
- residents living in the Devonport and Stonehouse and Dyke House operational areas were more likely to report involvement in civic consultation in the last 12 months compared with their matched comparison samples (19% vs 13% and 15% vs 9%, respectively).
- Residents living in the Devonport and Stonehouse operational area were also more likely to report involvement in civic activism in the last 12 months than their matched comparison sample (11% vs 7%).

2.8 Volunteering

The CLS measures both formal and informal volunteering:

- Formal volunteering is defined as unpaid help given as part of a group, club or organisation to benefit others or the environment. Two measures are used: (i) formal volunteering at least once a month; (ii) formal volunteering at least once in the last 12 months.
- Informal volunteering is defined as giving unpaid help as an individual to someone who is not a relative. Two measures are used: (i) informal volunteering at least once a month; (ii) informal volunteering at least once in the last 12 months.

Across all seven operational areas, informal volunteering was more prevalent than formal volunteering, which follows the national trend (DCMS, 2018).

With the exception of Manningham, Marsh Farm and Dyke House operational areas, there was little variation in formal or informal volunteering rates compared with their matched comparison samples (see Table 2.15).

However, there were lower levels of formal volunteering in the Marsh Farm operational area compared with the matched comparison sample (14% vs 19% at least once a month, 23% vs 32% at least once in the last 12 months, respectively).

Compared with the matched comparison sample, residents living in the Dyke House operational area reported higher levels of monthly informal volunteering (30% v 23%), whereas those in the Manningham operational area reported lower levels of monthly informal volunteering (20% v 35%).

Appendix A: Description of the seven Empowering Places areas

Abram Ward, Wigan

Abram Ward is made up of five villages on the outskirts of Wigan Town Centre. The largest villages are Abram and Platt Bridge which contain many of the leisure, sport, culture and entertainment facilities. The area’s proximity to Wigan, Manchester, Liverpool and Preston provides residents with an easy commute to nearby towns and cities.

Abram Ward Community Cooperative is working in the area, as part of the Empowering Places programme, to build an understanding of how community business could address the needs of Abram Ward.

Economic and socio-demographic profile of the operational area

The key operational area of Abram Ward Community Cooperative was defined and referenced to ONS Census Output Area geography. Around 1,000 households were randomly selected within the operational area to take part in the survey.

If the operational area was listed alongside all MSOAs in England, it would rank in the top 17% for multiple deprivation, in the bottom 10–15% for levels of educational attainment (level 2 and level 4) and in the bottom 22% for employment rate.

The majority (95%) of people living in the area are white British, 5% are White (Other), 1% are Asian and 1% identify as being from a black ethnic background, and there are relatively few residents aged 65 or older (13%).

Abram Ward Community Cooperative (www.abramwardcooperative.org)

Abram Ward Community Cooperative (AWCC) was launched in 2013. The AWCC is a collaboration of social enterprises, charities and community groups, that work together to create sustainable and innovative communities. Its partnerships enable it to develop capacity-building within the Abram Ward area and to create innovative projects that support a wide range of community needs.

The focus of AWCC’s Empowering Places five-year plan is to show how open spaces and community assets can support the growth of economy activity in the area. The plan establishes policies and procedures to ensure the growth of community businesses. AWCC aims to use the Neighbourhood Plan to influence planning and other infrastructure policies for the development of community businesses across the area, leading into the development of a local wealth building model.

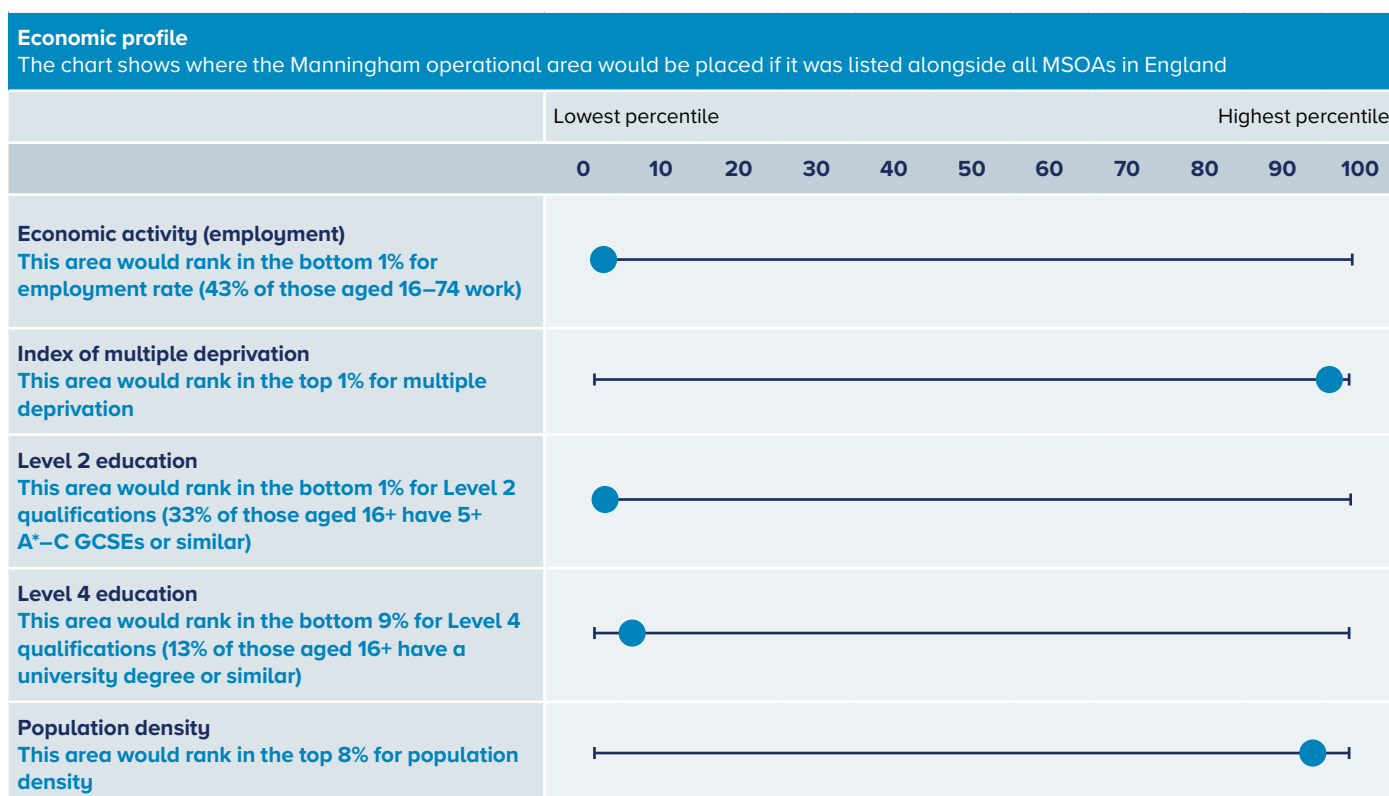

As part of a ‘Made in Wigan’ brand it has launched, AWCC has created a café and two craft workshops. It has also developed a mentoring manual for community businesses and has run an ‘Enterprise Day’ event, where new community businesses pitched for seed-funding. As well as working on its business plan, AWCC has been developing training programmes which involve developing new ways of communicating for those facing inequality around mental health or physical disability.

Manningham, Bradford

Manningham is a suburb less than a mile from the centre of Bradford. The area serves as a main route into the city centre and hosts Valley Parade, Bradford City’s football ground. The area is characterised by its industrial history, featuring Victorian mill buildings and ‘back-to-back’ terraced houses.

Action for Business is working in the area as part of Empowering Places to support and develop the local economy, through the provision of serviced office space, enterprise support, business support and employment and placements.

Economic and socio-demographic profile of the operational area

The key operational area of Action for Business was defined and referenced to ONS Census Output Area geography. Around 1,000 households were randomly selected within the operational area to take part in the survey.

If the operation area was listed alongside all MSOAs in England it would rank in the top 1% for multiple deprivation, bottom 1% for employment rate and bottom 1–9% for educational attainment (level 2 and 4). The area is densely populated and ranks in the top 8% for population density.

The area has a large Asian population (77%), with few people aged 65 or older (7%).

Action for Business Ltd (www.carlislebusinesscentre.co.uk)

Action for Business Ltd (ABL) was established in 1992 by local people to support entrepreneurs in Manningham to set up businesses for private profit and community benefit.

In 1996, in partnership with Bradford council, ABL renovated the derelict Carlisle Business Centre to create a modern workplace facility for meetings, training and events. Profits from providing serviced office space are reinvested into activities that benefit the community. ABL has also led various partnerships with local stakeholders, including the Manningham Healthy Living Initiative, Sure Start Manningham and various financial literacy programmes. ABL has established a Local Action Group and is working with local businesses, voluntary sector agencies, schools and residents to deliver a programme to bring meaningful jobs and business growth to the area. To ensure that local people from all communities benefit from opportunities, ABL works very closely with local voluntary and community sector organisations working with specific groups.

ABL's Empowering Places five-year plan focuses on a local brand, 'Made in Manningham'. Its vision is to create a destination location with opportunities for work and leisure for local people, by establishing five flagship businesses and making Carlisle Business Centre an exemplar community business itself. The 'Made in Manningham' programme was launched in the first year. There has also been more focus on developing the broader community. ABL has run 10 engagement events, made a number of seed grants, is supporting local people to develop their ideas into community businesses and has a mentor in place to help local women to develop the Made in Manningham Markets community business.

Braunstone, Leicester

Braunstone is a small town to the west of Leicester. The area was largely developed in the 1920s and boasts a large amount of green space. The area has a wide range of public facilities including a leisure centre, library and health centre. However, there is no main high street and no supermarket, greengrocers, butchers or pub in the area.

B-inspired is working in the area as part of Empowering Places to develop a Neighbourhood Action Plan, to inform and gather insights into the needs of the local community. A consultation occurs every two years and determines the area's priorities.

Economic and socio-demographic profile of the operational area

The key operational area of B-inspired was defined and referenced to ONS Census Output Area geography. Around 1,000 households were randomly selected within the operational area to take part in the survey.

If the operation area was listed alongside all MSOAs in England it would rank in the top 3% for multiple deprivation, bottom 9% for employment rate and bottom 2–6% for educational attainment (levels 2 and 4). The area is also relatively densely populated and would rank in the top 27% for population density.

The area is ethnically diverse – a higher than average proportion of the population are Black (7%) or Asian (6%). Only 11% are aged 65 or older.

B-inspired (www.b-inspired.org.uk)

B-inspired is a community business that trades for the benefit of Braunstone and its residents. It has been resident-led since its creation in 1998. As part of its community anchor role, B-inspired invests in the Braunstone Neighbourhood Action Plan in consultation with residents, service providers and other stakeholders. This is used to gather insights into the needs of local people and to adjust programme delivery.

B-inspired's Empowering Places five-year plan focuses on health, the provision of good services and better food. B-inspired aims to create a self-sustaining cluster of community businesses collected around a former council-run sports centre. B-inspired intends to use community businesses to improve pathways to learning and work, and to establish itself as a leader in producing innovative activities that focus on reducing health inequalities.

As part of the Empowering Places plan, B-inspired has secured the local sports centre and raised funding for its refurbishment. This will allow it to be developed as a space for new community businesses to emerge. B-inspired has also trained local people using the Yo Quiero Yo Puedo ('I Can, I Will') approach, increasing confidence, problem-solving capacity and reducing psychosocial barriers. It has also run 13 community events and local consultations.

Nunsthorpe and Bradley Park, Grimsby

Nunsthorpe and Bradley Park are estates to the west of Grimsby. The estates were developed in the 1940s and have few shops and no secondary school. However, there are other services including a doctor’s surgery on the edge of the area. The area has transport links to Grimsby town centre and Cleethorpes.

Centre4 is a community hub working to support the economic and social regeneration of the area. Through Empowering Places, Centre4 runs the Community business hub, which aims to support the development of ideas, activities, services and businesses that will make a difference to the local community.

Economic and socio-demographic profile of the operational area

The key operational area of Centre4 was defined and referenced to ONS Census Output Area geography. Around 1,000 households were randomly selected within the operational area to take part in the survey.

If the operation area was listed alongside all MSOAs in England it would rank in the top 3% for multiple deprivation, bottom 1% for educational attainment (levels 2 and 4) and bottom 3% for employment rate.

Most people in the area are white British (96%), 1% are Asian and fewer than 1% are Black.

Centre4 (www.centre4.org.uk)

Centre4 (formerly Second Avenue Resource Centre) was established in 1995 and exists to support the regeneration of North East Lincolnshire. It offers services and activities to the local community as well as incubator space for small businesses and social enterprises.

Centre4’s Empowering Places five-year plan focuses on bringing green and empty spaces back into use and providing job opportunities for local people. Its flagship community business has been identified as an Ethical Recruitment Agency (ERA) that will also provide training opportunities through social action. The plan places Centre4 as the key convener and incubator in a network of community businesses.

As part of its Empowering Places plan, Centre4 has run events and workshops that have supported people to gain confidence and skills. It also runs a community business hub drop-in and 14 new community business ideas have been generated by the local community as a result.

Marsh Farm, Luton

Marsh Farm is a suburban estate north of Luton. Built in the 1960s, it has transport links into Luton and good road and rail links to London and Luton Airport. The area has a number of schools and a leisure centre.

Marsh Farm Futures is working in the area as part of Empowering Places to build and create a community hub for enterprise and young people, from where it will run life-changing interventions.

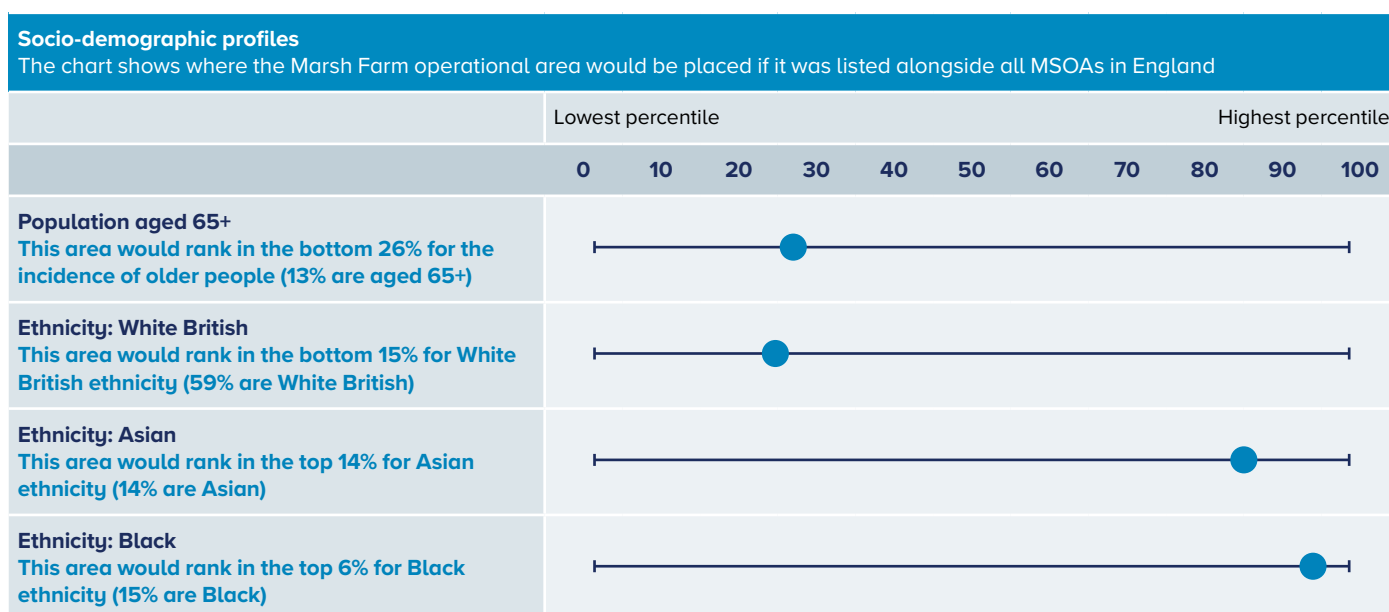

Economic and socio-demographic profile of the operational area

The key operational area of Marsh Farm Futures was defined and referenced to ONS Census Output Area geography. Around 1,000 households were randomly selected within the operational area to take part in the survey.

If the operation area was listed alongside all MSOAs in England it would rank in the top 25% for multiple deprivation, bottom 21% for educational attainment (level 2 and 4) and bottom 29% for employment rate. The area is relatively densely populated and would rank in the top 21% for population density.

The area is ethnically diverse; 14% of people in the area are Asian and 15% are Black. Only 13% are aged 65 or older.

Marsh Farm Futures (www.marshfarmfutures.co.uk)

Marsh Farm Futures (MFF) is the legacy organisation from a £48 million New Deal for Communities programme – funding that was awarded in 2001. It is committed to improving the economic, social and health wellbeing of residents and seeks to offer a community hub for enterprise and youth to run life-changing interventions.

MFF's five-year plan centres on economic regeneration and local wealth-building in the area. This is built on developing strategic relationships with key anchor organisations including the local authority, local colleges, Bedfordshire Chamber of Commerce and the University of Bedfordshire. MFF's aim is that these relationships will increase knowledge and influence policy decisions regarding the local economy and community businesses. MFF aims for a network of five newly-incubated community businesses to create spokespeople and inspiration for residents.

As part of the Empowering Places Plan, MFF has focused on building local relationships and communicating the idea of community business to local people. MFF staff are undergoing community organiser training to help. MFF has also built relationships with potential partners to develop community business ideas around organic food and produce, a dementia café, home repairs and maintenance, and youth activities.

Devonport and Stonehouse, Plymouth

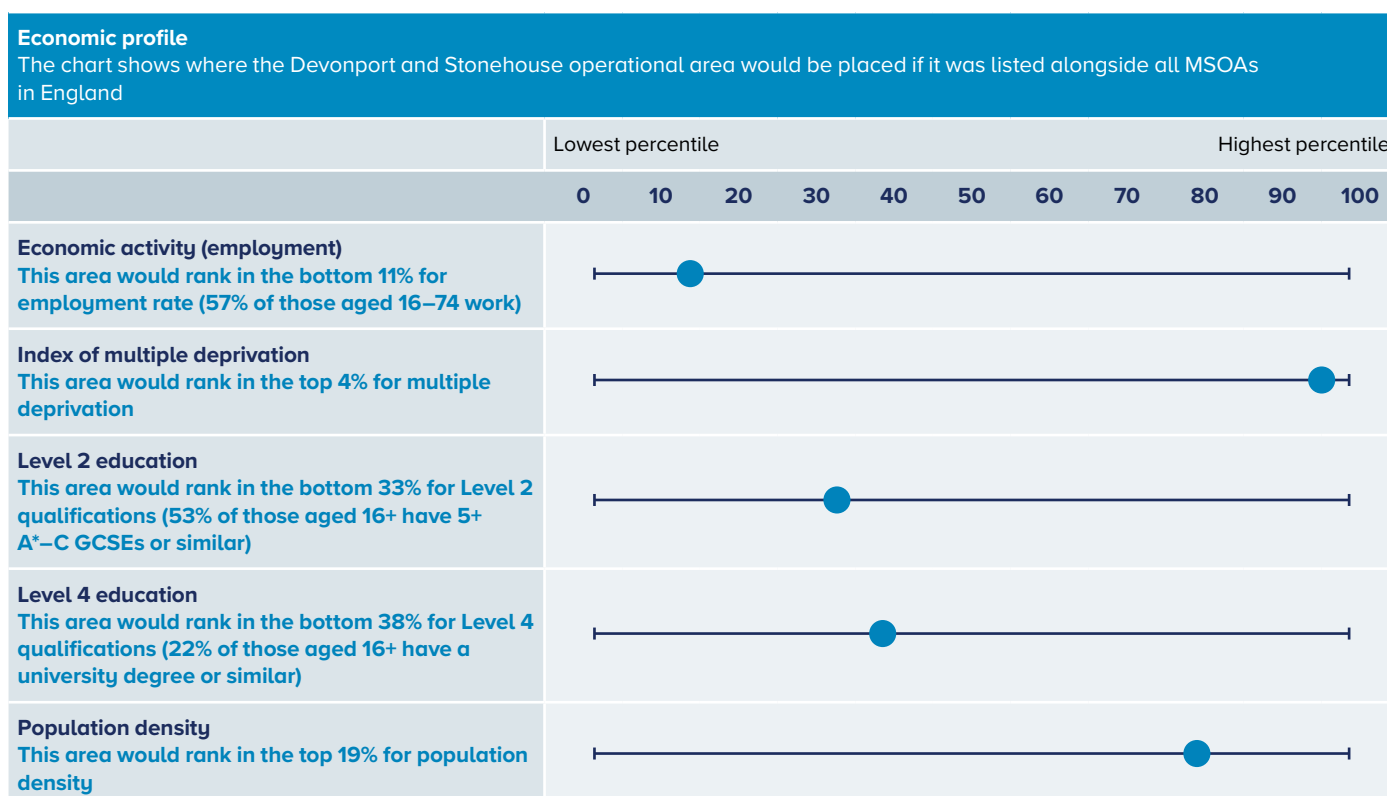

The Devonport and Stonehouse areas lie to the west of Plymouth within close reach of the city centre. Devonport and Stonehouse are two of three towns that were amalgamated into modern-day Plymouth. Both areas have connections to Plymouth’s naval and maritime history. Devonport has a shipping centre, train station and sports ground. Stonehouse hosts an international ferry port, a yacht-building works and a college.

Real Ideas Organisation CIC (RIO) is working in the areas to drive regeneration as part of Empowering Places, by providing affordable and flexible office space for SMEs to develop and grow from the space.

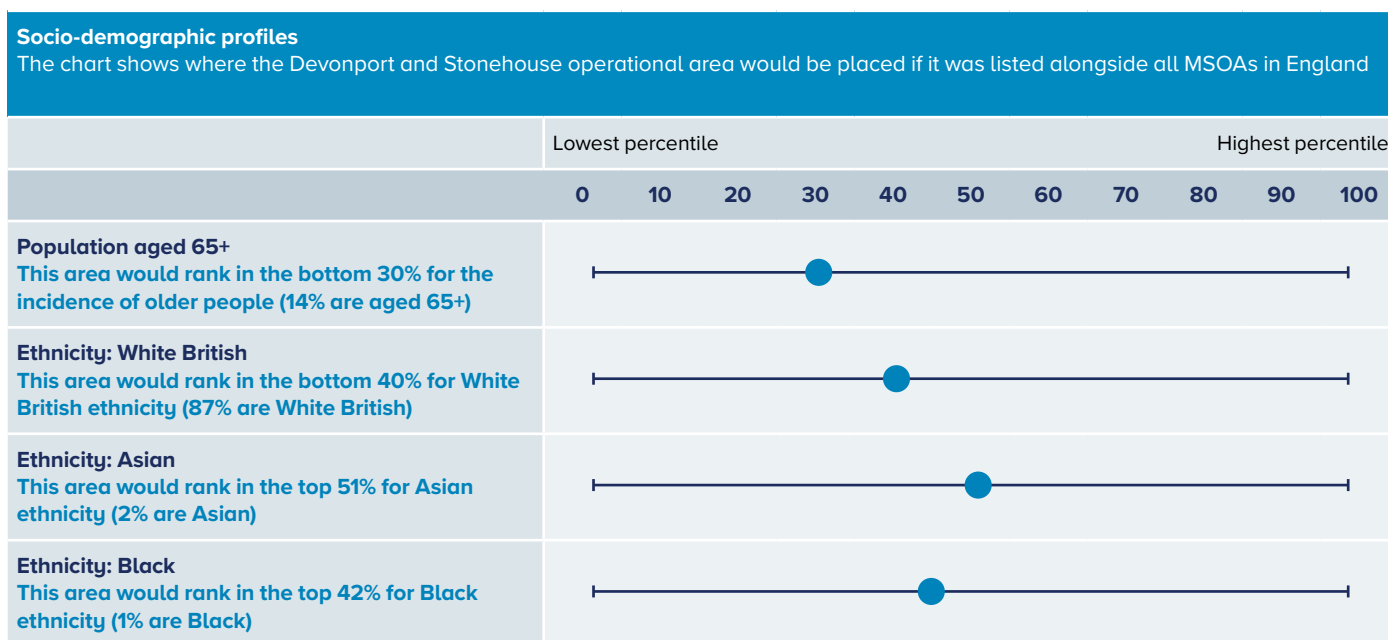

Economic and socio-demographic profile of the operational area

The key operational area of RIO was defined and referenced to ONS Census Output Area geography. Around 1,000 households were randomly selected within the operational area to take part in the survey.

If the operational area was listed alongside all MSOAs in England it would rank in the top 4% for multiple deprivation and bottom 11% for employment rate. The area is relatively densely populated and would rank in the top 19% for population density.

The majority (87%) of people in the area are white British, 2% are Asian and 1% are Black. Only 14% of people living in the area are aged 65 or older.

Real Ideas Organisation CIC (www.realideas.org)

Real Ideas Organisation CIC (RIO) was set up to catalyse and support social enterprise and develop innovative projects in Plymouth and beyond.

RIO's Empowering Places five-year plan focuses on how it will build its capacity as a catalyst and act as the key driver in transformational change in Devonport and Stonehouse, and more widely in Plymouth. An activity stream focuses on community engagement through a peer network, but the main focus of activity is the development of pioneer approaches to growing the overall community business sector in the area and creating a sustainable pipeline of activity.

As part of the Empowering Places programme, RIO set up a peer connector network that has led to the establishment of a number of community businesses. These include events, dance and theatre businesses, and a brewery. RIO has supported the development of Nudge Community Builders which has taken on assets in Union Street as part of plans to reinvigorate the area. It has also run a number of events with partners in Devonport and Stonehouse to build community involvement, tackle antisocial behaviour and to improve the environment.

Dyke House, Hartlepool

Dyke House is a square mile-sized estate in north Hartlepool. It has very little open space but has a primary school, college and several small shops. The area is a short distance from Hartlepool town centre and the marina.

The Wharton Trust is working in the area as part of Empowering Places to support residents in a variety of ways. It supports people to access employment and training advice and opportunities, promotes healthier lifestyles for all, engages young people in positive activities, and improves literacy and access to information through the community library.

Economic and socio-demographic profile of the operational area

The key operational area of Wharton Trust was defined and referenced to ONS Census Output Area geography. Around 1,000 households were randomly selected within the operational area to take part in the survey.

If the operational area was listed alongside all MSOAs in England it would rank highly for levels of multiple deprivation and lowly for educational attainment and employment rates. The operational area would rank relatively highly for population density.

It would rank in the top 4% for multiple deprivation, bottom 1–5% for educational attainment (level 2 and 4) and bottom 1% for employment rate. It would rank in the top 20% for population density.

The majority (97%) of people in the area are white British, 1% are Asian and less than 1% are Black. Only 14% of people living in the area are aged 65 or older.

The Wharton Trust (www.whartontrust.org.uk)

The Wharton Trust operates from The Annexe, a community and resource centre, to tackle the effects of worklessness and poverty by supporting people to access employment and training, promoting healthier lifestyles, engaging young people, improving literacy and developing information technology skills.

Wharton Trust's Empowering Places five-year plan places community business at the heart of the transformation it is seeking to create. Wharton Trust has taken a strategic approach that increases its own long-term sustainability, while helping to support the establishment of up to eight community businesses. It will also work with key stakeholders and other anchor organisations to make the case for community business and to put in place the infrastructure for local wealth-building.

As part of the Empowering Places plan, Wharton Trust has provided training for staff to build understanding of community business and has built stronger relationships with external partners. Its community organiser has engaged with 244 people and run community-based events.
